

Add MySQL database to replace JDBC

Story# [num]	Add MySQL database to replace JDBC	Priority	High		
		Effort	6		
As a	Developer,				
I want	To store the Booking system's data in an online MySQL database as opposed to the local test database,				
So that	The system's information can be stored and retrieved online.				
Acceptance criteria	AC 1: Given that our system is connected to an online MySQL database, When a user or team member sends a request to manipulate the stored data, Then the online database will be updated accordingly, and its contents will be reflected on our Frontend. AC 2: Given that our system is connected to an online MySQL database, When a user or team member sends a request to retrieve the stored data, Then the desired data will be retrieved from the online database.
