

Neil Kennedy User Story - create 'schedule' data

Story #	developer creates a Database SQL table to store 'schedule' data
As a	developer
I want	a table to store employee work schedules
So that	we can populate work for employees/services
Acceptance Criteria	<p>given a database is created for a company when a work schedule is assigned to an employee by an admin and no table already exists then a new table is created and the data is added.</p> <p>given a database is created for a company when a work schedule is assigned to an employee by an admin then a new table entry is created and the data is added.</p> <p>given a database is created for a company when a table fails to be created then an error response is returned</p>
