

# User Type Table(Developer) User Story

Story #[num]	<b>Developer Defines the User Type Table</b>
As a	Developer
I want	to create a table that stores the three types of users a registered account could be,
So that	I can allow accounts to register as one of the three, authorizing them to access specific system functionality based on their type.
Acceptance Criteria	<p>AC 1: <b>Given</b> that I am a developer creating the User Type table, <b>When</b> I add in a single column titled "Type", <b>Then</b> the table with have a column where it can store three different records for each type.</p> <p>AC 2: <b>Given</b> that I have already defined a single column titled "Type", <b>When</b> I use SQL to add a 'Customer' record, <b>Then</b> the table will contain a type customers can register under.</p> <p>AC 3: <b>Given</b> that I have already defined a single column titled "Type", <b>When</b> I use SQL to add an 'Employee' record, <b>Then</b> the table will contain a type employees can register under.</p> <p>AC 4: <b>Given</b> that I have already defined a single column titled "Type", <b>When</b> I use SQL to add an 'Admin' record, <b>Then</b> the table will contain a type admins can register under.</p>
priority	high
effort	low
