

Add logout endpoint

Story# [num]	Add logout endpoint	Priority	Low		
		Effort	1		
As a	Developer,				
I want	To implement a logout endpoint,				
So that	Logged in users can logout of the system.				
Acceptance criteria	<p>AC 1:</p> <p>Given that the current user is logged in, When they click the logout button, Then they're logged out of the system and redirected to the login page.</p> <p>AC 2:</p> <p>Given that the current user isn't logged in, When they attempt to click the logout button, Then they will fail as the logout button won't be displayed unless current user is logged in.</p>
